Profile

Innovative software engineer driven by curiosity and code, building scalable, secure solutions at the intersection of Java, AI, and cloud to drive transformative technology.

Skills and Technologies

Languages: C/C++, Java, Python, SQL, JavaScript, TypeScript, C#/.NET

Backend & Frameworks: REST APIs, Jakarta EE, Spring Boot, React, NextJS, NodeJS, ExpressJS, Microservices

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD (GitHub Actions, Jenkins), Git, Jira

AI & Developer Productivity: Codex, AI coding agents, prompt engineering, LLM guardrails, agentic workflows, AI-assisted debugging, internal tool automation

Databases: MySQL, PL/SQL, PostgreSQL, MongoDB, Oracle DB

Work Experience

Oracle July 2024 – Present
Software Engineer Hyderabad

- Contributed to an enterprise identity migration from an in-house IDM solution to Oracle IAM (OAuth 2.0), focusing on a SAML 2.0 SSO integration that allowed a client with 2M+ users to securely use their own identity provider.
- Developed core token validation logic and enabled secure login capabilities for multiple smaller products that previously relied on the legacy in-house IDM.
- Built custom session management features, including refresh token flows and specific logout flows (idle, manual, and permission-denied), preventing unwanted corporate logouts.
- Applied Codex-driven AI development workflows for code generation, refactoring, debugging, test scaffolding, and rapid prototyping with strong prompt guardrails and manual review.
- Built AI-assisted internal GUI tools to automate build generation, deployment preparation, and environment validation, reducing repetitive manual effort for developers.

Oracle Jan 2024 – June 2024
Software Engineer Intern Hyderabad

- Developed an ER data mapping framework by performing Python-based data analysis on Oracle SQL product schemas, improving data relationships visibility by 30% and accelerating cross-module integration workflows.

InfoEdge (Naukri.com) May 2023 – Jul 2023
BI Analyst Intern | Tech: Python, SQL, Tableau, Apache Zeppelin, Amazon S3 Noida

- Built Python + SQL-based usage drop detection system, enabling 20% lower churn risk through proactive retention.

Projects

FlowLens.AI: Product-Aware AI Testing Platform AI Vibeathon Finalist
Next.js, TypeScript, Playwright, Codex/GenAI, LLM Guardrails, Evidence Reporting

- Built an AI-assisted QA MVP that converts fragmented product knowledge into structured test cases, guarded UI execution, and evidence-backed reports.
- Designed a bounded agentic workflow where AI handles testcase planning and runtime reasoning, while TypeScript schemas, allowed actions, stop conditions, and Playwright execution keep browser automation safe and auditable.

Education

National Institute of Technology, Jalandhar Sep 2020 – Jun 2024
B.Tech – Computer Science and Engineering CGPA: 7.78/10

Certifications & Achievements

- Oracle Cloud Infrastructure 2025 Certified **AI Foundations Associate** [View Certificate](#)
- Solved 1000+ algorithmic problems across LeetCode, Codeforces and CodeChef.
- FIDE-rated National Chess Player (1597)**, reflecting strong pattern recognition and decision making abilities.
