

Rajan Dhiman

Software Engineer | Backend Engineering | Java | Microservices
Hyderabad, India | +91-6239415634 | rajaninvest597@gmail.com | [LinkedIn](#) | [Portfolio](#)

Skills

Languages: Java, C++, Python, SQL, JavaScript, TypeScript, C#

Backend & Systems: Microservices, REST APIs, Spring Boot, OAuth 2.0, SAML 2.0, JWT, IAM, Authentication & Authorization

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, GitHub Actions, Jenkins, Git

AI & Automation: Codex SDK, MCP, Playwright, AI Agents, Agentic Workflows, LLM Guardrails

Databases: Oracle DB, PostgreSQL, MySQL, SQLite, MongoDB

Work Experience

Oracle

July 2024 – Present

Software Engineer

- Implemented OIDC authentication using OAuth 2.0 Authorization Code Flow and SAML 2.0 federation during migration from a legacy identity platform to Oracle IAM, enabling federated SSO for an enterprise customer with **2M+ users**.
- Built backward-compatible JWT validation for legacy and Oracle IAM flows, including public-key retrieval, signature verification, claims validation, and identity-source validation for seamless migration.
- Developed end-to-end authentication and session-management flows, including authorization-code exchange, access/ID/refresh tokens, token refresh, and idle/manual logout workflows.
- Extended authentication and session-management capabilities across the primary web application and a C#-based Excel add-in.
- Implemented federation-aware functionality and reporting capabilities, enabling enterprise customers to identify and manage users configured for SSO authentication.
- Built an internal developer environment portal using Node.js, React, SQLite, and PowerShell, centralizing environment information, patching workflows, service-management utilities, and frequently used developer commands.

Oracle

January 2024 – June 2024

Software Engineer Intern

- Developed an ER data-mapping framework using Python analysis of Oracle SQL product schemas, improving data-relationship visibility by 30% and accelerating cross-module integration workflows.

InfoEdge (Naukri.com)

May 2023 – July 2023

Business Analyst Intern

- Developed a Python and SQL-based statistical usage-analysis pipeline to analyze historical product-usage patterns and identify customer accounts showing potential churn signals.
- Automated generation and delivery of actionable customer-risk reports to product owners, enabling teams to proactively investigate usage issues and engage potentially at-risk customers.

Projects

FlowLens.AI – Product-Aware Agentic UI Testing Platform

Next.js, TypeScript, Playwright, Codex SDK, MCP, LLM Agents, LLM Guardrails

- Led a **5-member team** to build an AI-assisted QA platform converting product knowledge and natural-language requirements into structured test plans, autonomous browser execution, and evidence-backed reports.
- Initially explored deterministic LLM-to-Playwright orchestration, identified reliability limitations, and redesigned the architecture around **Codex SDK integrated with Playwright MCP**.
- Built an agentic execution workflow where the AI performs runtime reasoning and directly invokes Playwright browser tools, reducing custom orchestration while improving testing flexibility and reliability.
- Delivered a functional MVP within the **one-week Vibathon**, finishing as a **Top-5 finalist**; continued development with internal QA teams.

Education

National Institute of Technology, Jalandhar

September 2020 – June 2024

Bachelor of Technology – Computer Science and Engineering

CGPA: 7.78/10

Certifications & Achievements

- Oracle Cloud Infrastructure 2025 Certified **AI Foundations Associate** [View Certificate](#)
- Solved **1000+ Data Structures and Algorithms problems** across LeetCode, Codeforces, and CodeChef.
- FIDE-rated Chess Player – Rating: 1597**
